For some people who can't be able to create new objects mesh, here there are some tips to create very particular furnishing by using only the objects that you have on your buy catalog.

For some people who can't be able to create new objects mesh, here there are some tips to create very particular furnishing by using only the objects that you have on your buy catalog.

For make it you need some cheats, so you must open cheats window by pressing **CTRL, SHIFT** e **C**.
Now you can see a small window on the top of monitor, where write the follow codes.

moveObjects on

For put objects inside other objects. For deactivate write **moveObjects off**.

boolProp snapObjectsToGrid false

For move objects where you want. For deactivate it use **boolProp snapObjectsToGrid False**, if you keep it active you can't place windows and doors on your lot.

If you don't activate **moveObjects**, you can't create L design Loveseating. With **boolProp snapObjectsToGrid**
you can move two concatened objects at the same time.

Here some example creating by me.

L Design

Double Armoire

Gym for couple

Bookcase inner counter

Bed with curtains

Very long Endtable
